3. Insert into Device

Feature introduction

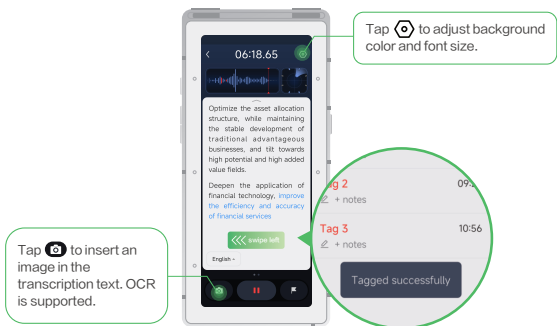

1. Recording Settings

- ① Tap  to enter the settings page.
- ② In the settings interface, select the recording mode and choose the target language from the list.

2. Real-time Transcription

- ① Tap  or double-tap the device's side recording button to start recording and real-time transcription.
- ② Tap  or the side volume button to add a tag, swipe left on the page to view and edit added tags.
- ③ Tap  to stop recording, tap [Complete], and then [Save] in the pop-up to save it.

3. Simultaneous Translation

- ① Tap [Simultaneous Translation], choose the recording and translation languages, and tap  to start simultaneous translation.
- ② Connect wired or Bluetooth earphones to listen to the translation in real time.
- ④ Tap  to stop recording, tap [Complete], and then [Save] in the pop-up to save it.

4. OCR

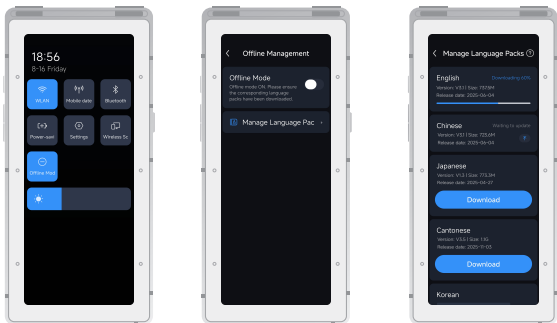

- ① Tap [OCR], tap  to select the language for recognition, and tap to take a photo or select a photo from the Album.
- ② Tap [Next] to crop and rotate the photo, then tap [Start] to begin.
- ③ Tap [Generate Document], then tap [Save] in the pop-up to save it.

Supports OCR for paper documents, meeting screens, PowerPoint, etc. Up to 9 images can be recognized at once.

5. Offline Mode Settings

- ① Tap [\[Offline Mode\]](#) in the drop-down menu or on the [\[Offline Management\]](#) page to turn on the [\[Offline Mode\]](#) switch and switch the recorder to offline mode.
- ② Tap [\[Manage Language Packs\]](#) to download and delete offline resources.

If the recorder account is not logged in, Offline Mode turns on automatically. Recording, transcription, and simultaneous translation features will use offline capability by default.

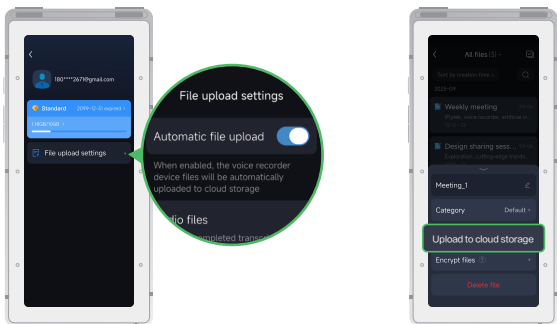

Online Mode: Access transcription and translation results via the cloud engine, requires network connection and account login, offering higher accuracy.

Offline Mode: Use the local engine for transcription and translation, data will not be uploaded to the cloud, and it works without network or login.

6. File Management

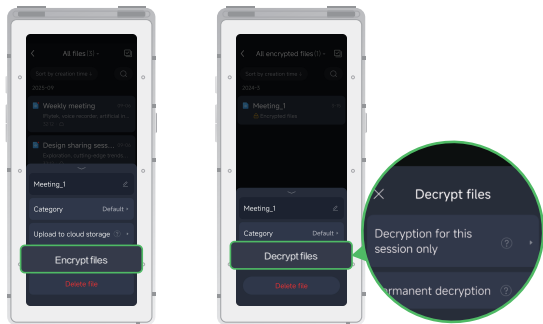

6.1 File Management & File Upload

- ① Tap [\[My\]](#) > [\[File upload settings\]](#) to choose which file types to automatically upload.
- ② Tap [\[File\]](#) to view audio and OCR files.
- ③ Tap [\[Album\]](#) to view photos and video files.
- ④ In [\[File\]](#) or [\[Album\]](#), long-press a file, tap [\[Upload to cloud storage\]](#) to manually upload to the cloud.

6.2 File Encryption & Decryption

- ① In [File] or [Album], long-press a file and choose [Encrypt files]. You must set an encryption password the first time.
- ② After encryption, the file will move to [Encrypted Folder].
- ③ In [Encrypted Folder], tap a file, enter the password to view it.

Decryption for this session only: The file is temporarily decrypted for this session only, and remains encrypted in [Home] – [Encrypted Folder] when you return.

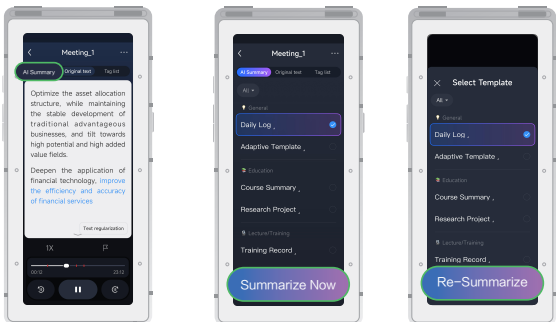

Permanent Decryption: The file will be fully decrypted and moved to [File] or [Album]. You can still encrypt it again if needed.

6.3 Manage Files via the Web

Enter cloud.ifytekrecord.com in the browser, log in with the recorder account, and manage files on the web.

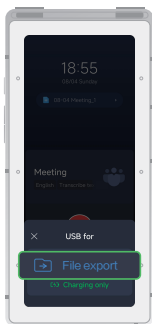

7. AI Summary

- ① In [File], tap the recording file, and tap the [AI Summary] in the top left.
- ② Choose a template, tap [Summarize Now] to create the AI summary.
- ③ Tap **...**, then tap [Regenerate AI Summary], select a template, and tap [Re-Summarize] to regenerate the summary.

8. File Export

- ① Use a USB cable to connect the recorder to the computer.
- ② Unlock the recorder and tap [\[File export\]](#).
- ③ On the computer, open the device storage, select the file, and copy it to the computer.

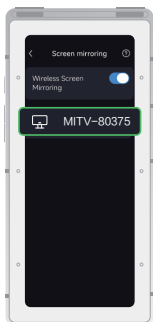

For Mac computers, you may need to install Android File Transfer or other Android file transfer tools.

9. Screen Mirroring

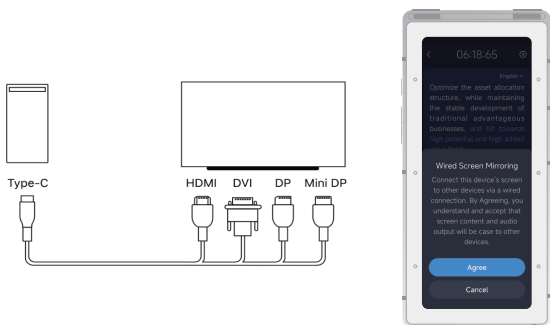

9.1 Wireless Screen Mirroring

- ① Tap [\[Wireless Screen Mirroring\]](#) in the drop-down menu, or enable the [\[Wireless Screen Mirroring\]](#) on the [\[Screen projection\]](#) page.
- ② In the screen mirroring device list, tap the corresponding device name to connect and start mirroring.

9.2 Wired Screen Mirroring

Use an adapter cable to connect the recorder to the screen mirroring device, tap [\[Agree\]](#), and start screen mirroring.

9.3 Screen Mirroring Mode

- ① It defaults to mirror mode.
- ② Recording and simultaneous translation support switching between mirror mode and adaptive mode.

Precautions

1. The operating system only supports official upgrades. Users who install non-official systems will be responsible for any resulting security risks and losses. (Information theft, etc.)
2. Using incorrect batteries or exposing the product to water or fire sources may pose an explosion risk. You are fully responsible for any risks and losses (such as explosion risks) caused by improper use.
3. This product does not come with an adapter. Please use an adapter that meets local regulations and matches the product's specifications.
4. Due to carrier restrictions, network connectivity may be limited when using an AT&T SIM card. Please prioritize using a SIM card from a carrier other than AT&T.

Disposal and recycling notice

To better protect our planet, when you no longer use this product or its service life ends, please comply with national laws and regulations regarding the recycling of electronic waste and hand it over to local recyclers certified by the government for recycling and processing.

After-Sales Service

This product comes with a 12-month warranty or an extended period (in compliance with local laws and regulatory requirements). If a performance defect occurs under normal use within the warranty period, you will be entitled to free warranty service. A valid device serial number and proof of purchase are required to claim the service.

For more after-sales service policies—including specific warranty coverage, valid proof requirements, and local after-sales channels in your region—please refer to <https://www.iflytek.com/en/support/warranty-policy.html>.

Ai

The image features the letters 'Ai' in a blue-to-teal gradient. The 'A' is a simple, bold, sans-serif font. The 'i' is also bold and sans-serif, but its top portion is replaced by a cluster of colorful pixels in shades of yellow, red, green, and blue, creating a digital or data-like effect.
